

Privacy Browser - Feature #161

Consider using non-bolded red text to indicate unencrypted websites.

Description

A user has requested that the text not be bold. I want it to stand out because unencrypted websites are very bad for privacy, and in this day and age there is no excuse to run an unencrypted webserver, so whenever you visit a website that is unencrypted it is a warning to you that the website operators don't understand what they are doing or don't take your privacy seriously.

<https://www.eff.org/encrypt-the-web>

That being said, I think I will try setting the red `http://` to not be bold for a couple of weeks on my device to see if it still stands out enough for my taste.

I think using non-bolded text works well. Implemented in
