Description

This would involve updating WebView's internal scroll tracker whenever `startNestedScroll()` is called.

[https://developer.android.com/reference/androidx/core/view/NestedScrollingChild#startNestedScroll\(int\)](https://developer.android.com/reference/androidx/core/view/NestedScrollingChild#startNestedScroll(int))

And would fix the buggy behavior described at <https://www.stoutner.com/bug-in-webviews-handling-of-nested-scrolling/>.

I would only make this change if it isn't too invasive and would be easy to maintain in the long run.
